Interpretation:

We would expect electricity generation to fall during a shutdown as commercial and industrial activity is reduced. And pick up again alongside economy.

Number of job ad listings and views relative to before Covid-19. We would expect to see businesses hiring again, and jobseekers searching more as economic activity picks up.

We would expect spending to track overall economic activity; household spending makes up around 60% of the economy.

We would expect to see increased broadband data use on the Chorus network when people are home, for social connection, more entertainment and working from home.

We would expect to see increased traffic congestion as people go back to work, school and other usual travel patterns.

The number of flights across our 3 main airports. We would expect this to increase as the pandemic comes under control.
